

First session summary

- Excellent advances in RNC prediction at a fine regional scale, that can now move to operational implementation
- Great to know how to access the plethora of data that has been collected by Aerial Surveys – and 3D Mesh maps look extremely useful
- Survey highlights that training and exposure is impt for uptake. Encouraging to see marked increase in uptake over time for most data, apart from hyperspectral!
- Great to see TFF is so active, and focusing on tech transfer in impt areas, clearly great progress is being made but at the same time there are challenges to continue momentum around this important initiative
